

CO-SYSTEM

CO-SYSTEM is a practical and useful system to allow internal sub-division of the CO boxes. All ESD safe, very stable and recommended for storage and delivery of electronic populated boards.

CO-SYSTEM is designed for CO boxes 400x300mm and 600x400mm. It includes the box, the hinged cover, the internal grooved walls and a choice of subdividers. The SYSTEM is assembled and inserted into the box where it remains stable and fixed.

Then you can select the right internal dividers to suit the best design for your needs.

The hinged cover allows to close the box, in this way protecting from dust and external electrostatic fields. In fact the "Faraday Cage" effect is reached only when the box is effectively closed. When the box is closed it is already ready to exit the E.P.A. and travel safely to destination.
